Grafana

From
Dashboarding solution
To
Observability platform

Instant query

queries only the last datapoint
best displayed in table panel

The screenshot shows the Grafana query editor interface. At the top, there are tabs for 'Table', 'General', 'Metrics', 'Options', 'Column Styles', and 'Time range'. The 'Table' tab is selected. Below the tabs, there is a 'Data Source' dropdown menu set to '\$datasource'. The query text is `sum(kube_pod_container_resource_requests_cpu_cores) by (namespace)`. Below the query, there are several configuration options: 'Legend format' (legend format), 'Min step' (15s), 'Resolution' (1/2), 'Format as' (Table), 'Instant' (checked), and a share icon. The 'Format as' dropdown, the 'Instant' checkbox, and the share icon are circled in orange.

Legend format	Min step	Resolution	Format as	Instant
legend format	15s	1/2	Table	<input checked="" type="checkbox"/>

▼ CPU Requests

Requests by Namespace

Namespace	CPUs (Requests)	CPUs (Limits)	CPU Usage
prod	40.35	38.00	16.89
dev	4.65	0.50	0.68
kube-system	1.24	-	0.07
default	0.74	0.69	0.13

released in 5.1

Query: `rate(foo_metric_bucket[10m])`

Legend format: `{{le}}`

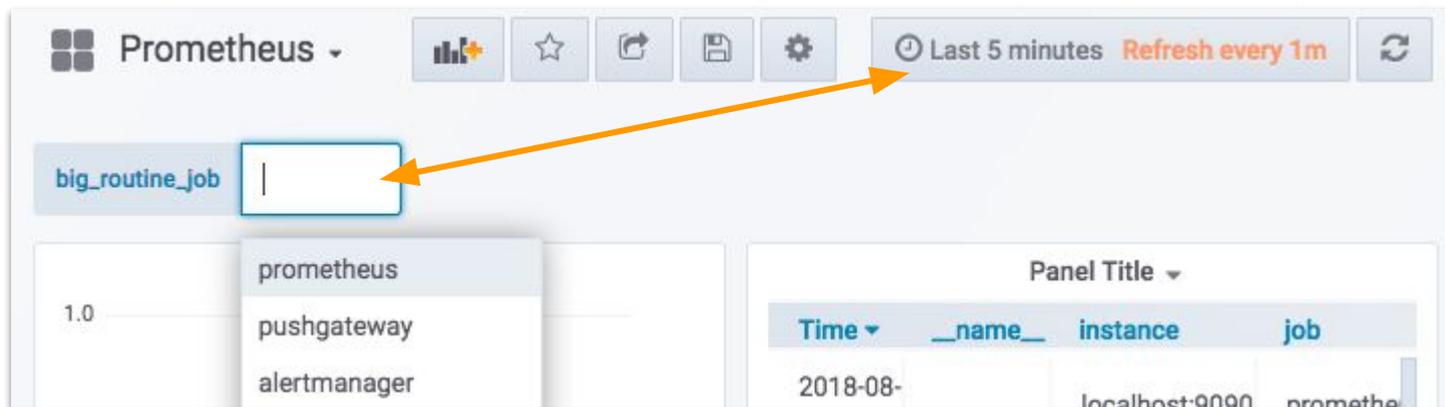

Format as: Heatmap

Variable expansion in template variables

Summer intern project (Tobias, tak!!)

New built-in variable: `$_range`

Dashboard-range-based variables

The screenshot shows the Grafana interface with a dashboard titled "Prometheus". The top navigation bar includes a "Last 5 minutes" time range selector and a "Refresh every 1m" button. An orange arrow points from the "Last 5 minutes" selector to a dropdown menu for the "big_routine_job" variable. The dropdown menu lists "prometheus", "pushgateway", and "alertmanager". Below the dropdown, a table is visible with columns "Time", "__name__", "instance", and "job". The table contains one row with the value "2018-08-" in the "Time" column, "localhost:9090" in the "instance" column, and "promethe" in the "job" column.

Time	__name__	instance	job
2018-08-		localhost:9090	promethe

Provisioning API

Define data sources and dashboards in files

Auto-reload on change

Allows version control of files

Provisioning Grafana

In previous versions of Grafana, you could only use the API for provisioning data sources and dashboards. But that required the service to be running before you started creating dashboards and you also needed to set up credentials for the HTTP API. In v5.0 we decided to improve this experience by adding a new active provisioning system that uses config files. This will make GitOps more natural as data sources and dashboards can be defined via files that can be version controlled. We hope to extend this system to later add support for users, orgs and alerts as well.

Config File

Checkout the [configuration](#) page for more information on what you can configure in `grafana.ini`

Config File Locations

- Default configuration from `$WORKING_DIR/conf/defaults.ini`
- Custom configuration from `$WORKING_DIR/conf/custom.ini`
- The custom configuration file path can be overridden using the `--config` parameter

<http://docs.grafana.org/administration/provisioning/>

Grafana is now fully CI'ed

Test new features that are in master:

```
docker run -d --name=grafana -p 3000:3000 grafana/grafana:latest
```

<https://hub.docker.com/r/grafana/grafana/>

New: Explore UI (Alpha)

Motivation

Dashboard UI is made for building dashboards, not query iteration.

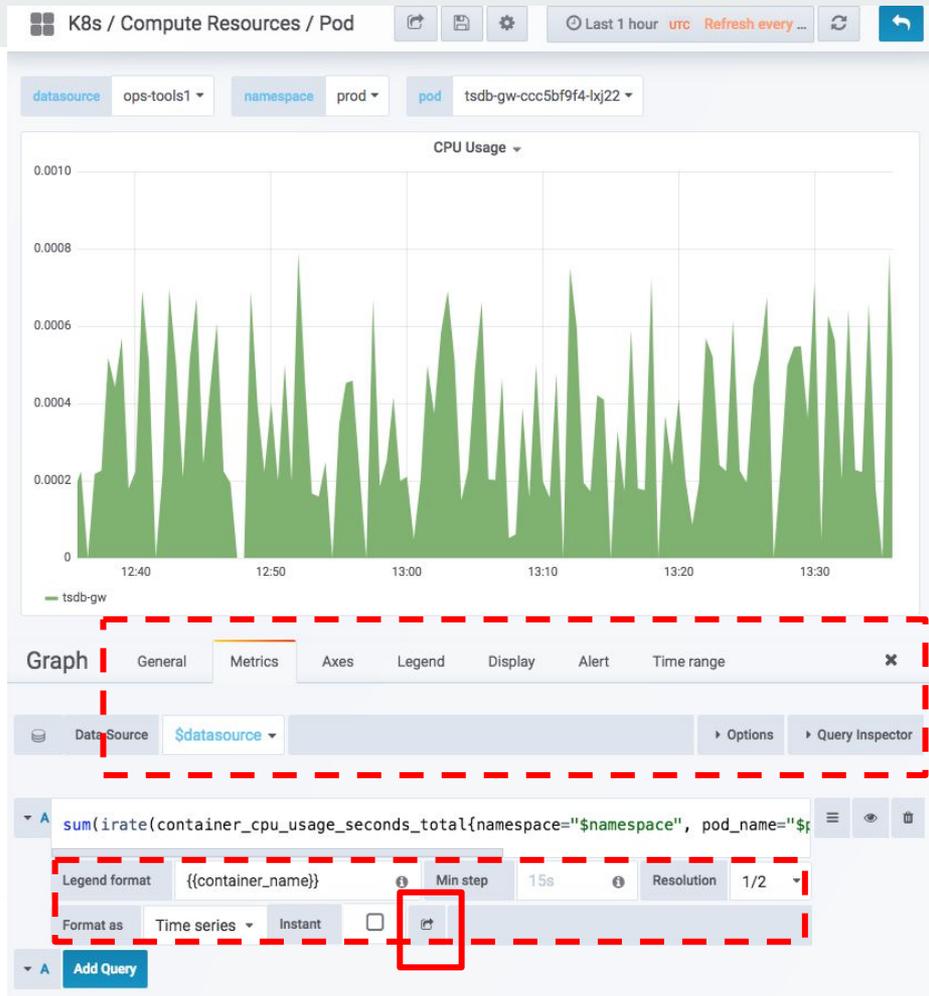

“I just want to quickly...”

Motivation

once panel is found, difficult to interact with

overwhelming style and display options

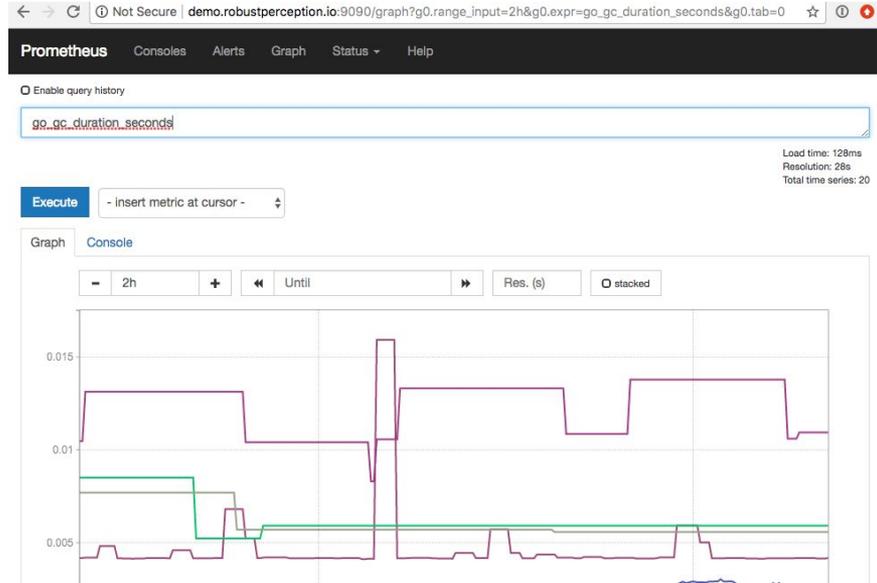

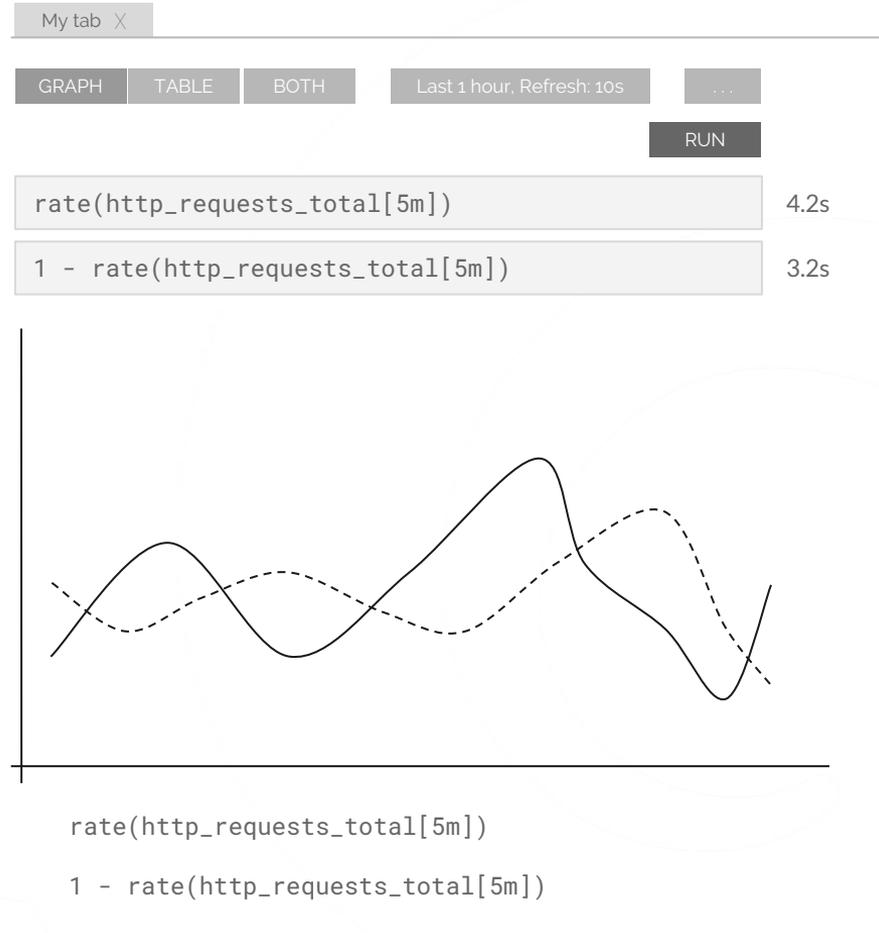

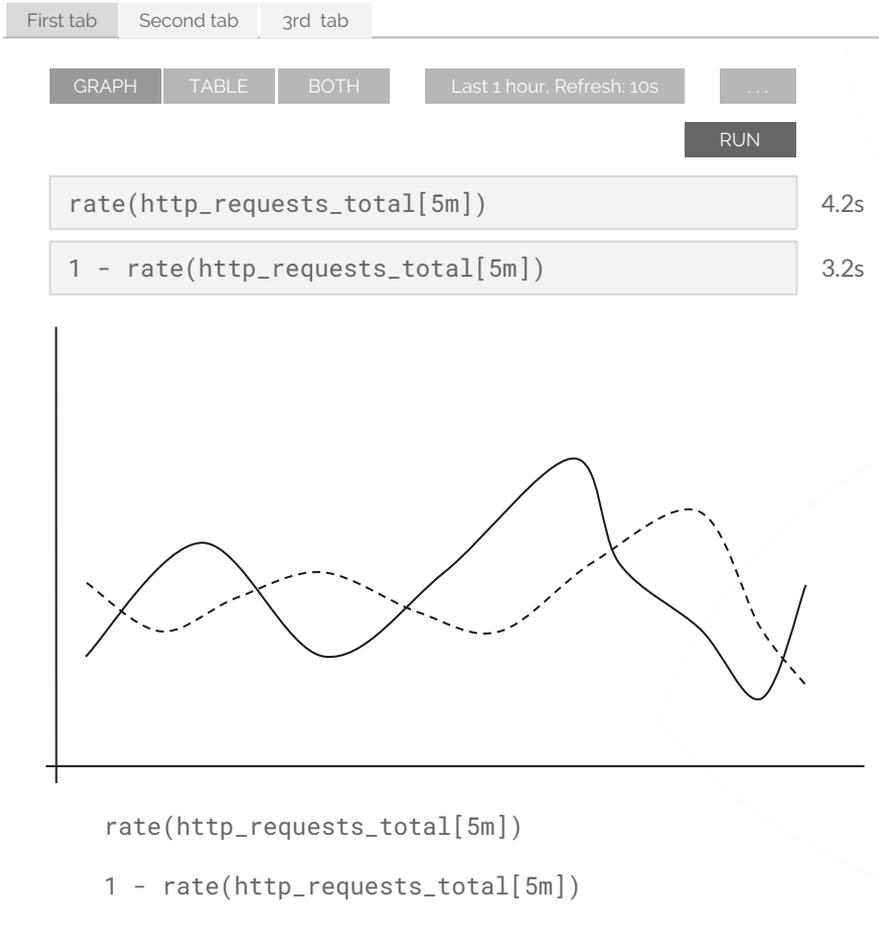

Motivation

Incident response currently happens elsewhere!

User story:

As an SRE, I want to investigate a certain aspect or incident of my infrastructure. I'm already looking at the right dashboard panel and have formed a hypothesis. From here I want to quickly run variations of the panel's query to verify my hypothesis. The panel I started from should stay unaffected.

Demo: <http://localhost:3333/explore>

Enable Explore UI

Behind feature flag. To enable, edit Grafana config ini file

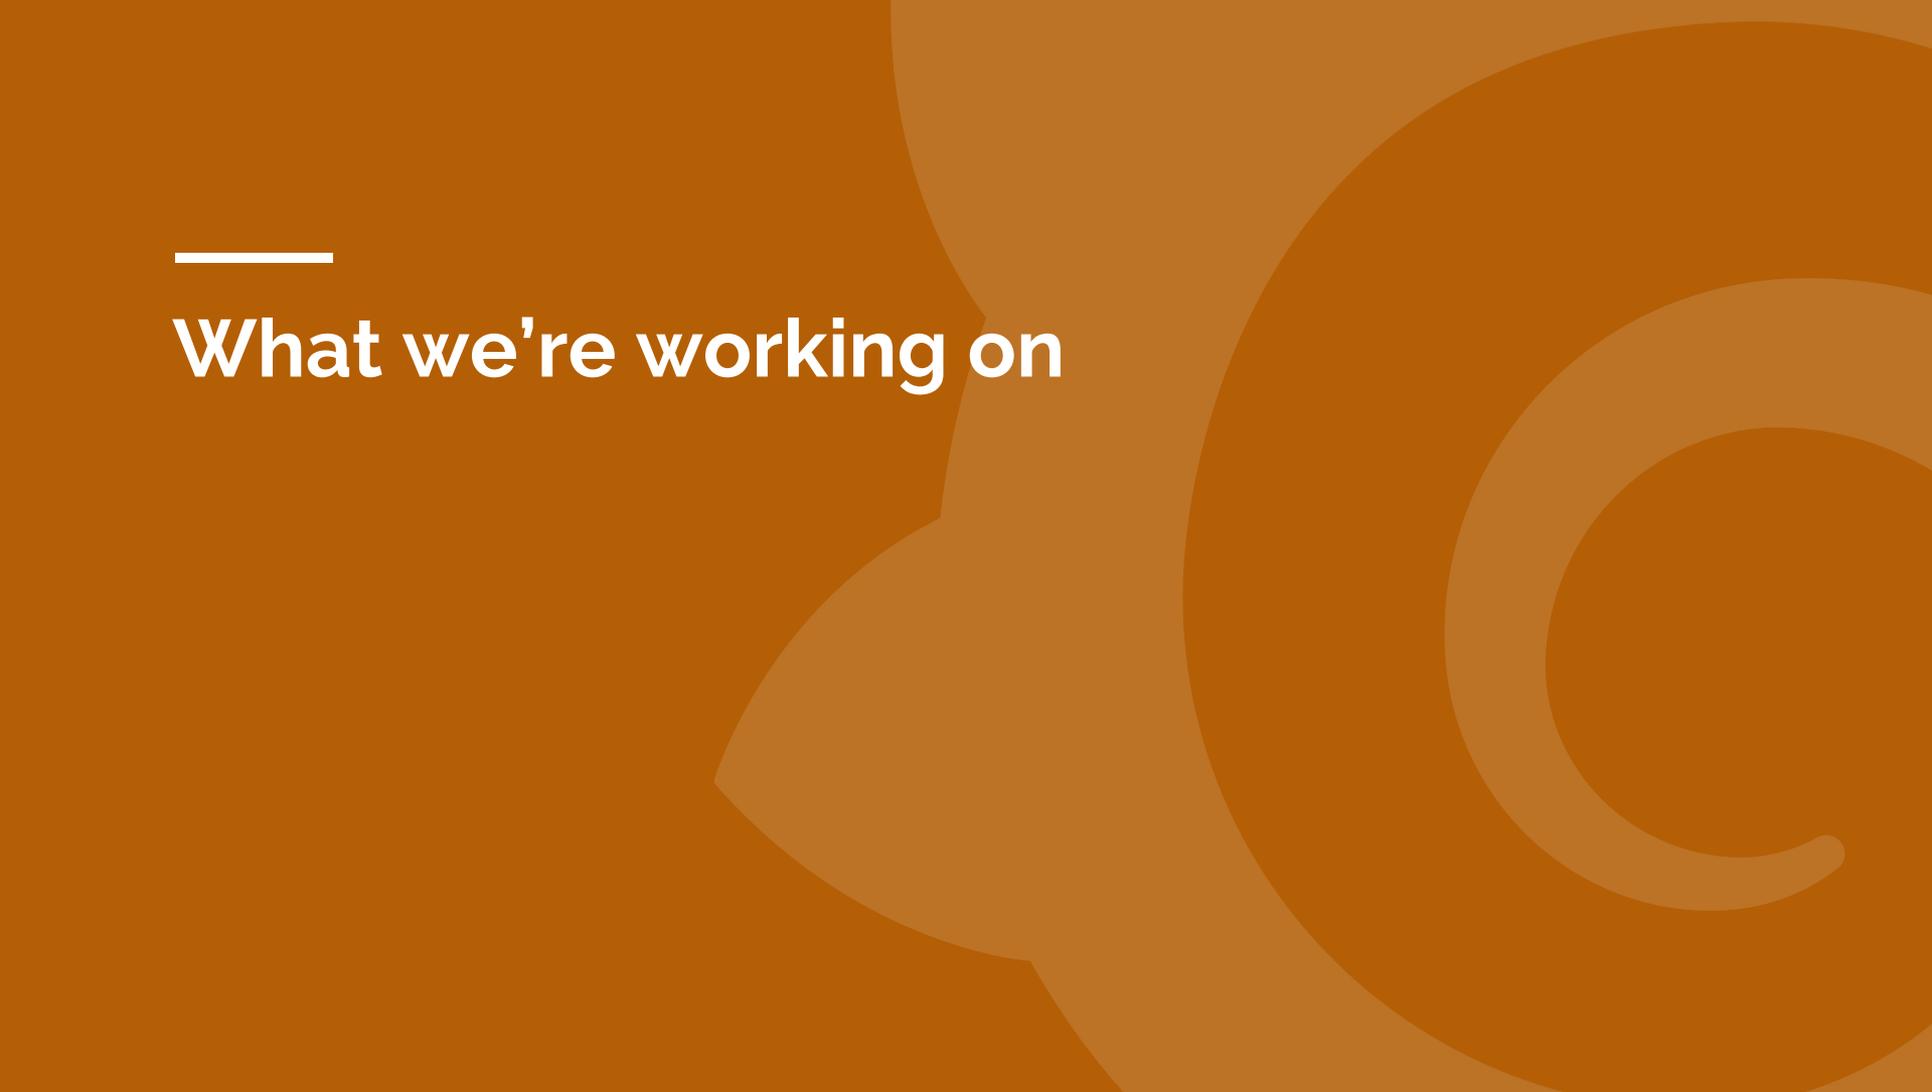

```
[explore]
```

```
enabled = true
```

Set up a datasource that supports Explore, e.g., Prometheus.

Will be released in 6.0

What we're working on

Explore UI needs to be refined

still behind feature flag, feedback welcome: @davkals or david@grafana.com

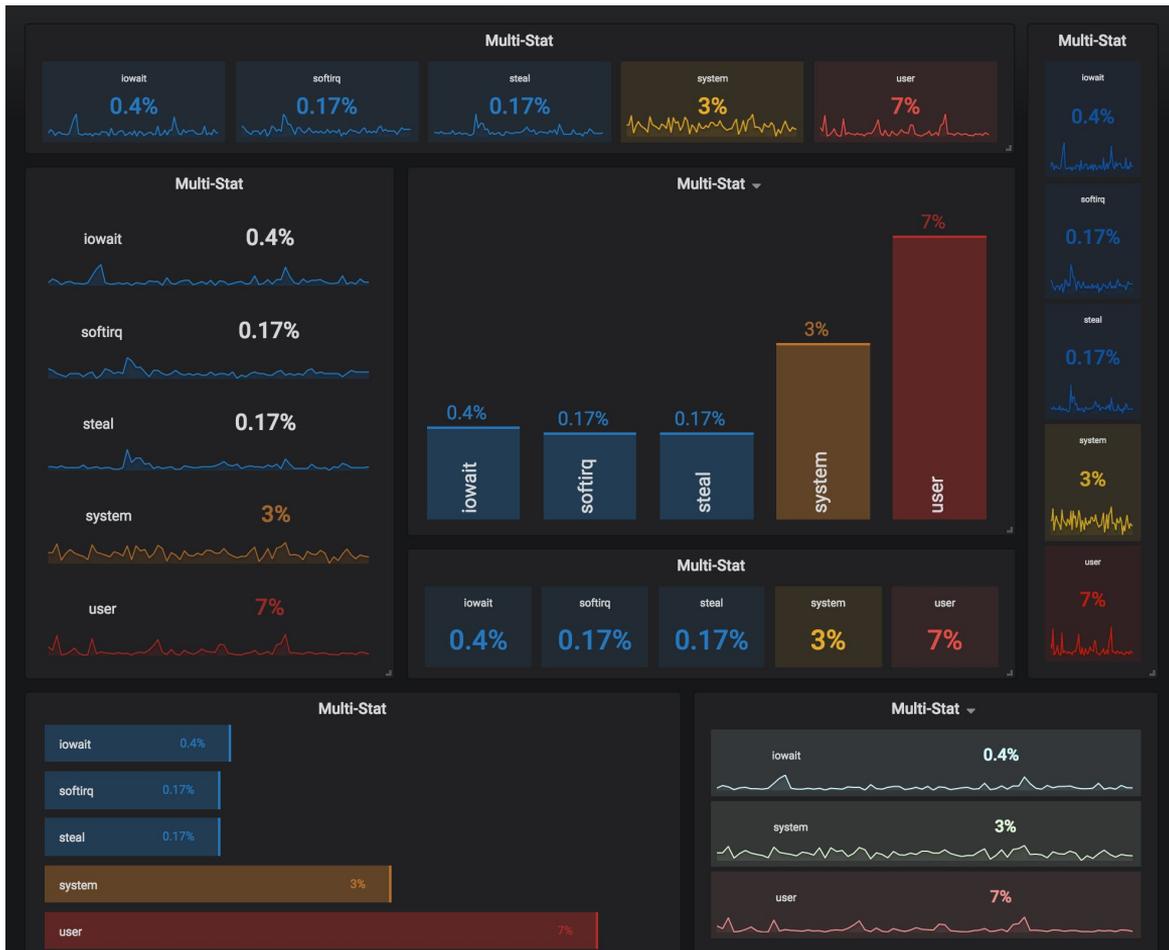

Prometheus metric metadata from HELP line in the exposition

support for completion for

```
foo_metric / on(|) group_left(|) bar_metric
```

design doc for explore components for other datasources

bring query field over to panel editor

MultiStat panel <https://github.com/grafana/grafana/pull/12620>

Dashboard management

Improve Grafana's integration with Mixins (see Tom Wilkie's talk)

Git integration to save changes back

Defaults for panel configs

One more thing...

Metrics

`{job="metrictank/cassandra"} GC`
